TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL

Frameworks & Web: React, Redux, Node.js, Express, Spring (MVC/DAO), REST APIs, MERN, HTML, CSS, Bootstrap, jQuery, XML

Databases: PostgreSQL, MySQL, SQL Server, Prisma

Cloud & Big Data: AWS (S3, EC2, Lambda, Glue, SageMaker), Hadoop, Hive, Pig, Spark/PySpark

DevOps & Tools: Docker, Kubernetes, Maven, Jenkins, SonarQube, Git (GitHub/ Bitbucket/ GitLab), Jira, Confluence, ServiceNow, Dynatrace, ELK, Kubernetes, GitHub Copilot

Practices: Agile/Scrum, CI/CD, Microservices, B2B Integration, Unit Testing (Jest, Junit), Technical Leadership, Mentoring

PROFESSIONAL EXPERIENCE

Software Engineer III

Nov 2023 – Present

Northwestern Mutual — Remote (San Diego, CA)

- **Led end-to-end engineering for two third-party vendor integrations (Broadridge, Cvent)** into the compliance platform — owning requirements, architecture, development, testing, and production support. Broadridge integration eliminated ~1,500 hours of manual case processing per year.
- **Built an internal AI agent that auto-generates API test payloads** — parsing schemas, resolving reference fields, and producing ready-to-run curl commands with realistic data, so engineers can test endpoints instantly instead of hand-crafting or borrowing payloads; contributed to the company's broader AI initiative.
- **Earned a stretch rotation onto the AI Hub team** on the strength of these AI contributions, helping drive the organization-wide, large-scale Nexus-to-Artifactory migration.
- **Designed a reusable vendor-integration framework** (architecture diagrams, standardized payloads, B2B connection patterns, and test/deployment templates) that cut planning effort for new integrations by ~80%.
- **Delivered the Cvent integration with zero post-production incidents** across 46 JIRA stories, personally building ~41% of them; enforced a Level-3 quality gate that drove the new TypeScript service to 87% unit-test coverage against a 65% company standard.
- **Led the Department-wide unit-testing OKR for the an application**, raising coverage from 36% to 50% and exceeding the annual target; the strategy was adopted by other teams across the division.
- **Drove estimation accuracy and delivery**, reducing a feature estimate by ~75% (33 → 8 story points) through scoping guidance; introduced a per-engineer point cap later adopted as the division-wide velocity benchmark.
- **Mentored 5–7 engineers and offshore teams** as applications subject-matter expert; established “ready-for-dev” refinement standards that kept the team at 2+ sprints of healthy backlog and ~23 points/sprint velocity (highest-contributing app team in the division).
- **Led a fast-turnaround, business-critical feature** under an urgent timeline, delivering on schedule to meet a time-sensitive business request.

Software Engineer II

Jan 2022 – Nov 2023

Northwestern Mutual — Remote (San Diego, CA)

- **Built the MMCS v2.0 application from the ground up** using React, Redux, Express, Node.js and PostgreSQL, consistently delivering 6–18 story points per sprint while maintaining 80%+ Jest test coverage.
- **Led a sub-team of 4–6 engineers** to resolve 25 vendor defects end-to-end — completing 80% within 20 days against a target six weeks out and repairing a strained vendor relationship.

- **Designed RESTful API routes and payloads** as part of a cross-company design team, serving as the technical bridge between Northwestern Mutual and vendor engineering.
- **Cut defect-fix lead time** from an estimated 2 months to 80% complete in 22 days by reorganizing, documenting, and prioritizing the backlog.

Software Engineer

Feb 2021 – Jan 2022

AmpliFI Loyalty Solutions — Naperville, IL

- **Designed and built RESTful web services** using Java, Spring MVC, and MyBatis, with PostgreSQL databases provisioned via shell scripts across environments.
- **Developed responsive UIs** with HTML, CSS, JavaScript, and jQuery in JSP from wireframes and behavior specifications.
- **Owned build and deployment pipelines** with Maven, Tomcat, Jenkins, and SonarQube, using log4j for structured logging, debugging, and monitoring.

Software Developer Intern

Jun 2020 – Dec 2021

AmpliFI Loyalty Solutions — Naperville, IL

- **Built AWS Glue ETL pipelines** to migrate legacy MySQL data to PostgreSQL using S3 and Python (boto3, pandas, numpy).
- **Resolved defects via SonarQube** in a JavaScript/CSS/Bootstrap/JSP web application while working in an Agile environment with Jira, Bitbucket, and Confluence.

EDUCATION

M.S., Computer Science — Illinois Institute of Technology (GPA 3.6/4.0)

Aug 2019 – May 2021

B.E., Computer Science — Visvesvaraya Technological University (GPA 3.6/4.0)

Aug 2015 – May 2019

AWARDS & LEADERSHIP

- **Fan Favorite Award, ESD Hackathon, Northwestern Mutual (Mar 2025)** — for “Devy,” a Slack bot gamifying developer productivity; earned the most votes company-wide.
- **Selected Speaker, Revel in Tech 2025** — “Leading from the Trenches: Driving Impact and Innovation as an Engineer” (Career Master track).
